

Table 5. Cumulative HIV infection¹ cases, reported to state/territory health departments through December 2000, from 6 areas with HIV reporting systems using coded patient identifiers²

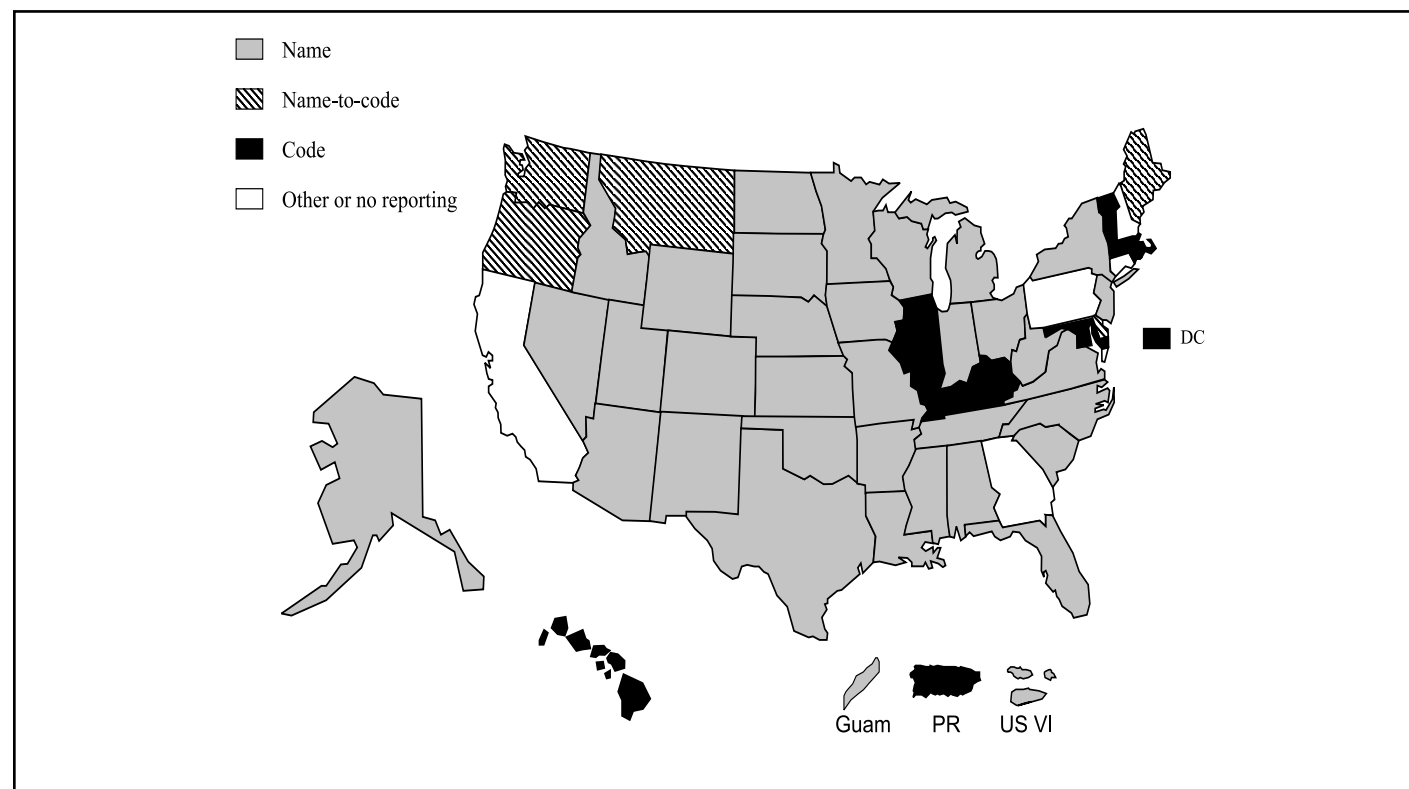

Area of residence (Date HIV reporting Initiated)	Adult/ adolescent Males	Adults/ adolescent Females	Children <13 years old	Total ³
Illinois (Jul 1999)	2,609	864	125	3,598
Maine (Jul 1999)	172	53	2	227
Maryland (Jun 1994)	7,080	4,379	152	11,647
Massachusetts (Jan 1999)	3,541	1,578	238	5,357
Puerto Rico (Oct 1998)	2,370	1,024	51	3,445
Washington (Sept 1999)	1,734	329	30	2,093

¹Includes only those persons reported with HIV infection who have not been reported with AIDS through 2000.

²Patients identified by code in initial surveillance reports or for storage in HIV registries.

³Row totals may not equal the total of columns, reflecting cases reported with unknown gender (range 0-0.3%).

Figure 1. HIV infection¹ case reporting, by patient identifier scheme and area, implemented as of December 31, 2001

¹Includes only those persons reported with HIV infection who have not been reported with AIDS.
